Dataset Overview

3,900

Transactions

Purchase records analyzed

18

Features

Data points per transaction

37

Missing Values

Imputed in review ratings

Data Preparation Process

01

Data Loading

Imported dataset using pandas

03

Missing Data Handling

Imputed median ratings by category

05

Feature Engineering

Created age groups and purchase frequency

02

Initial Exploration

Checked structure and summary statistics

04

Column Standardization

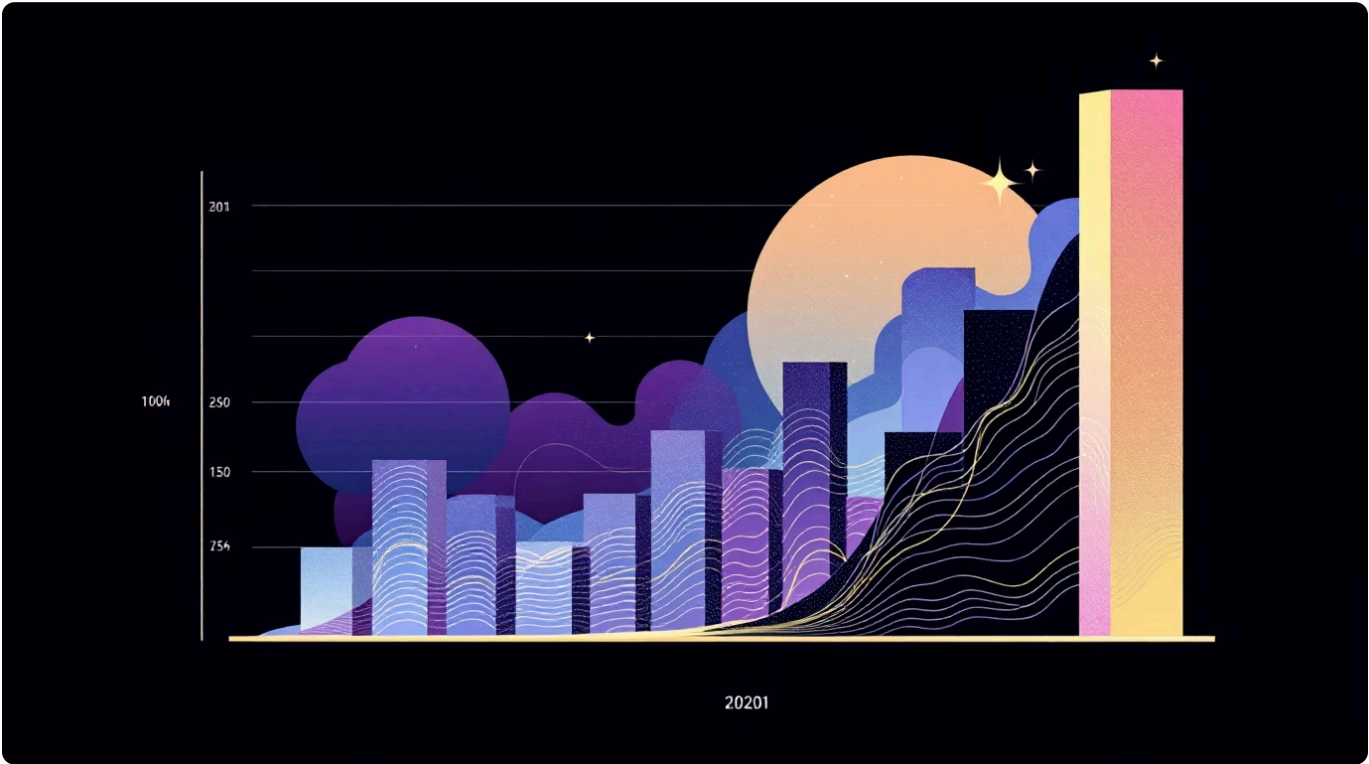

Renamed to snake case for readability

06

Database Integration

Loaded into MySQL for SQL analysis

Revenue by Gender

Key Finding

Revenue comparison between male and female customers

High-Spending Discount Users

Strategy

Identified customers who used discounts but spent above average

Insight

Discounts drive purchases without sacrificing revenue

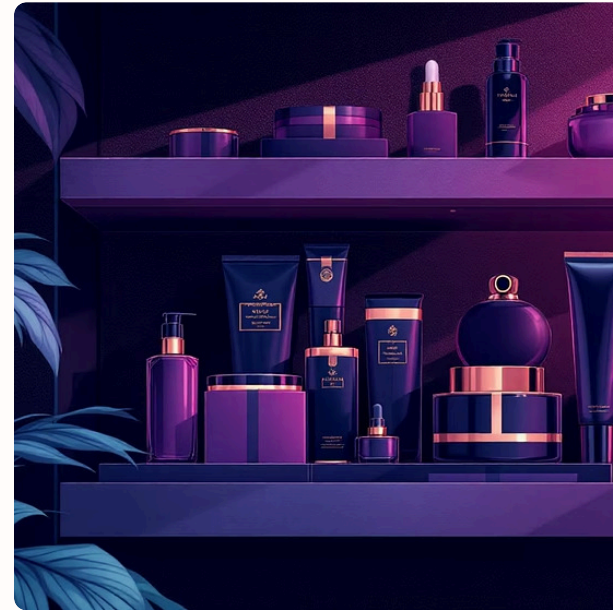

Top Products by Rating

Top-Rated Products

Products with highest average review ratings

Quality Focus

High ratings indicate customer satisfaction

Shipping & Subscription Analysis

Shipping Comparison

Compared average purchase amounts between Standard and Express shipping

Subscriber Revenue

Compared average spend and total revenue across subscription status

Customer Segmentation

New

First-time buyers

Returning

Multiple purchases

Loyal

Consistent shoppers

Power BI Dashboard

Interactive visualizations for real-time insights

Strategic Recommendations

Boost Subscriptions

Promote exclusive benefits

Loyalty Programs

Reward repeat buyers

Review Discount Policy

Balance sales with margins

Targeted Marketing

Focus on high-revenue groups
